SFW = Surface Facilities associated with a disposal well (class 1b or 1a): Receiving system for oilfield waste prior to deep well injection.

SFC = Surface Facilities associated with a cavern: Receiving system that enables slurring of oilfield waste into a cavern.

LF = Landfill (class 1a, 1b, II or III): Final disposal location for solid oilfield waste that involves the disposition of waste material into a cell and then capping the cell upon closure

WPF = Waste Processing Facility: Normally tanks used for purposes such as neutralization of materials, solids processing and hydrocarbon extraction. Facility may also include deep well injection of fluids and cavern disposal.

BF = Biodegradation Facility: Enables the removal of hydrocarbon contamination from soil by optimizing environmental conditions for microbial activity.

TS = Transfer Station: Provides short term storage for 3rd party oilfield waste and, if approved, non-oilfield waste which is later transferred to an appropriate facility

CT = Custom Treater: Separates oil/water emulsions received directly from well licensees, and treats the oil to meet pipeline specifications. Facility may also include deep well injection of fluids.

WT = Waste Transfer Area: Provides short term storage for 3rd party oilfield waste and, if approved, non-oilfield waste which is later transferred to an appropriate facility for processing. Located on an oilfield waste management facility.

Please note that the information provided above reflects that found in the most recent approvals and approval amendments. Some services may no longer be available, and construction of certain facilities may not be complete. Oilfield waste generators are encouraged to contact the waste company to confirm the services offered by a facility of interest.
